

- Female infertility – 472% increase
- Pulmonary embolism – 468% increase
- Migraines – 452% increase
- Ovarian dysfunction – 437% increase
- Testicular cancer – 369% increase
- Tachycardia – 302% increase

Renz also informed me that some DMED data showing registered diagnoses of myocarditis had been removed from the database.⁵ Following the allegation that DMED data had been doctored, I immediately wrote to you on January 24 requesting that you preserve all records referring, relating, or reported to DMED.⁶ I have yet to hear whether you have complied with this request.

At the roundtable, Renz revealed the names of the brave whistleblowers who uncovered this information in DMED: Drs. Samuel Sigoloff, Peter Chambers, and Theresa Long.⁷ Any retaliatory actions taken against these individuals will not be tolerated and will be investigated immediately. In order to better understand what, if any awareness DoD has about COVID-19 vaccine injuries to service members, I request you provide the following information:

1. Is DoD aware of increases in registered diagnoses of miscarriages, cancer, or other medical conditions in DMED in 2021 compared to a five-year average from 2016-2020? If so, please explain what actions DoD has taken to investigate the root cause for the increases in these diagnoses.
2. Have registered diagnoses of myocarditis in DMED been removed from the database from January 2021 to December 2021? If so, please explain why and when this information was removed and identify who removed it.

Please provide this information as soon as possible but no later than February 15, 2022. Thank you for your attention to this matter.

Sincerely,

Ron Johnson
Ranking Member
Permanent Subcommittee on Investigations
